Critical Studies

GL International is delighted to sponsor a series of summer programs focusing on food systems and sustainability. These critical fields are of interest not only to students of Japan but to anyone interested in human health and environment. By focusing on similar issues in Vietnam, Italy, and Japan we give students the opportunity to experience, in consecutive programs, three of the world's great food cultures and the challenges facing them.

Italy

This program assists students in understanding the role of food in human cultures as well as the range of choices and values implicit in the foods eaten in Italy and elsewhere. Based in the heart of historic Rome — only minutes from the Vatican, the Colosseum and the Pantheon — this five-week program introduces participants to the on-site exploration of food systems and sustainability. While staying in nearby apartments, students can take up to three academic courses taught by local faculty. Each course is complemented by regular excursions into Rome or other areas of Italy. Students are asked to keep journals and to engage in ethnographic research projects. All courses are conducted in English. This program was designed and created in collaboration with the University of Massachusetts Amherst in 2010. Since 2015, it also has been promoted by the University of Illinois at Urbana Champaign.

Duration

5-week Full Immersion Program

When

May 20 – June 22, 2019

Where

Rome, Italy

Credits

Up to 9 credits, please work with your home university study abroad office to assure full credit.
